

# HackEurope Paris Team:

"Please wear the bracelets we will give you"...

**300 Paris hackers. 0 bracelets.**

Something between meetings and execution probably broke.

# Meetings create tasks and ... problems

- Tasks scattered across meeting transcripts, chats and notes

- No clear accountability or owners assigned to tasks

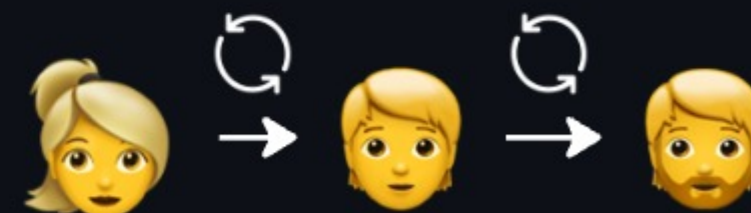

- Finding what was decided means digging through dozens of notes

- Turning meeting notes into actionable tasks is a manual, repetitive chore

- Every meeting creates a chain of follow-up conversations just to get everyone on the same page

# YOUR MEETINGS **MEMORY LAYER**

## INPUTS

Meeting transcript  
Organisational Chart  
Other Metadata

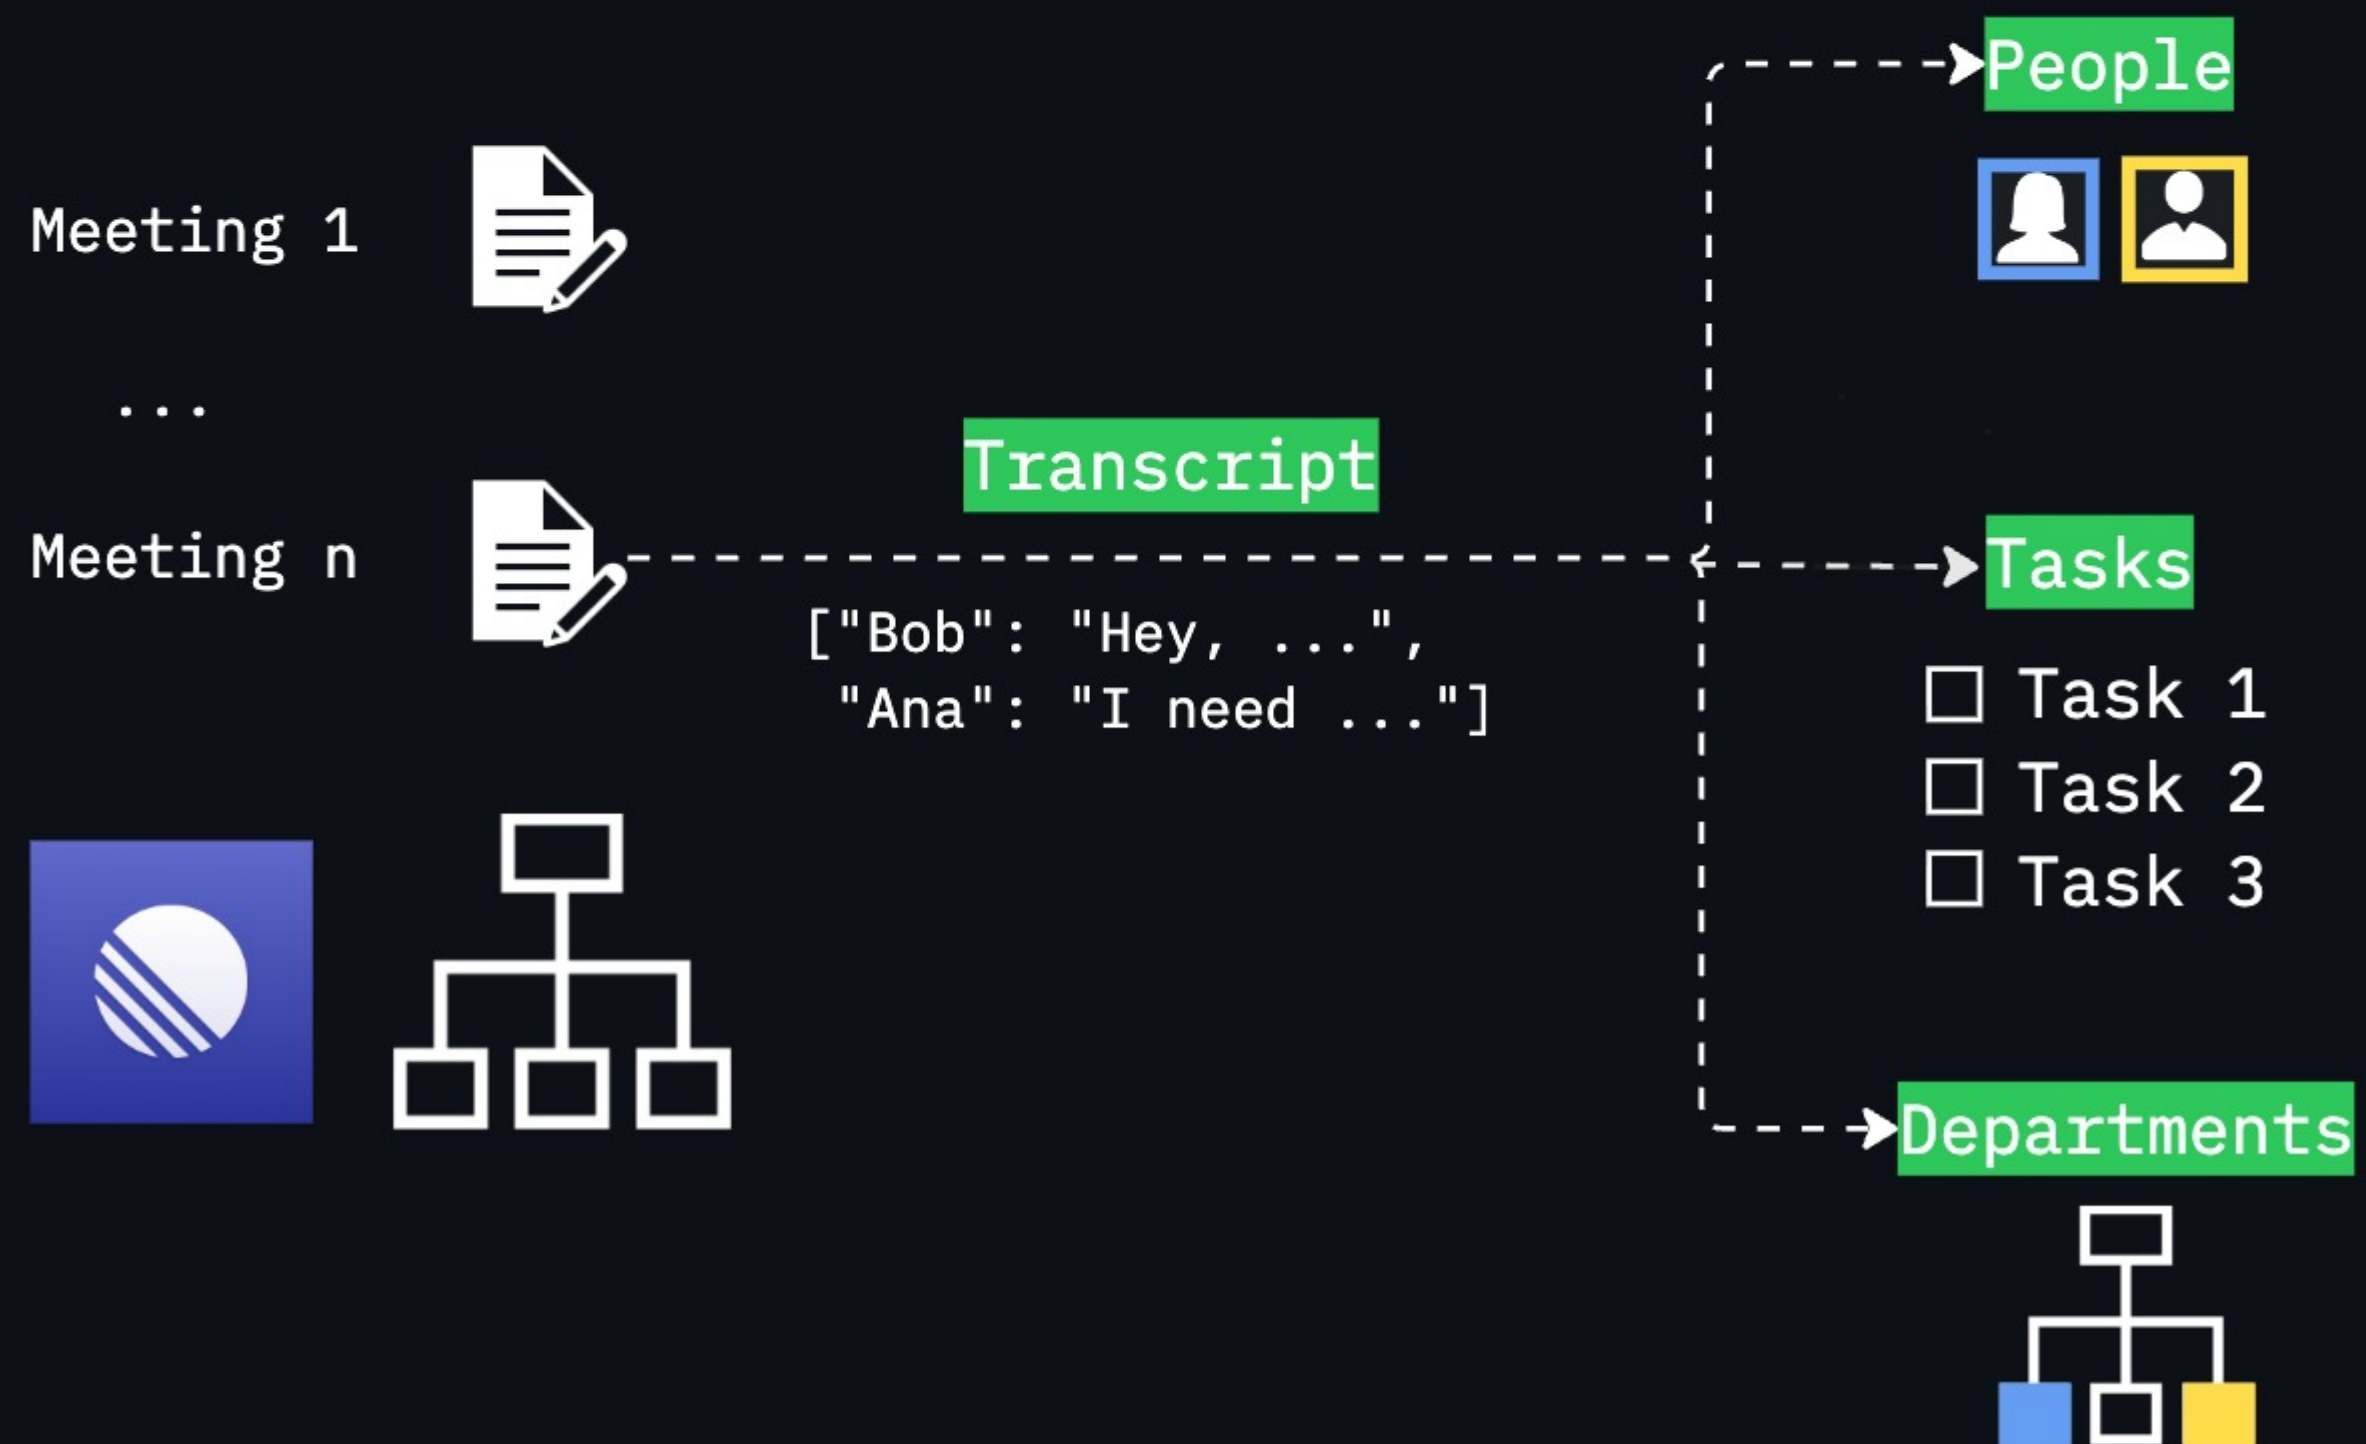

## EXTRACTION

Parse tasks, departments,  
people and temporal data

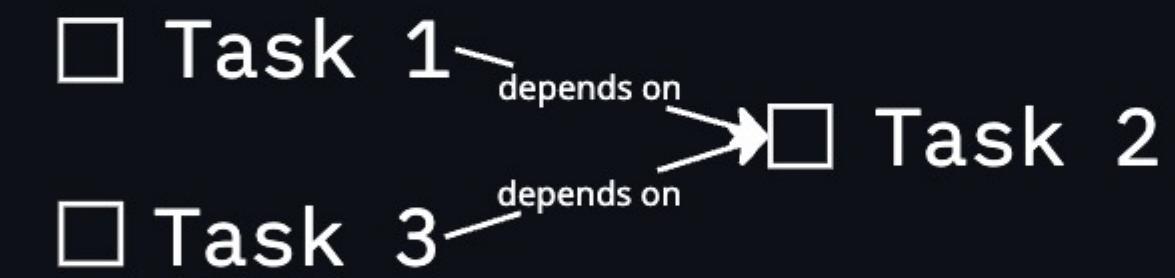

## MEETING MEMORY LAYER

Temporal knowledge graph  
Track decision chains and status  
Detect ownership

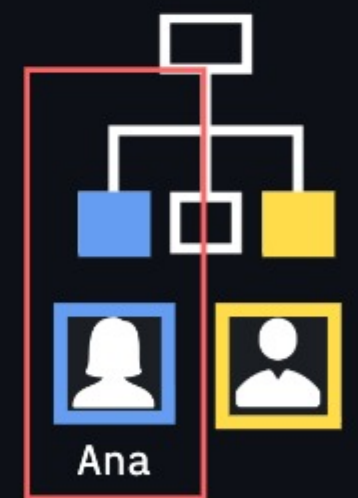

## Dependencies Between Actions

## Assign ownership to Tasks

Task 1: Action X should be accomplished by department Y

## Extract semantics into knowledge graph

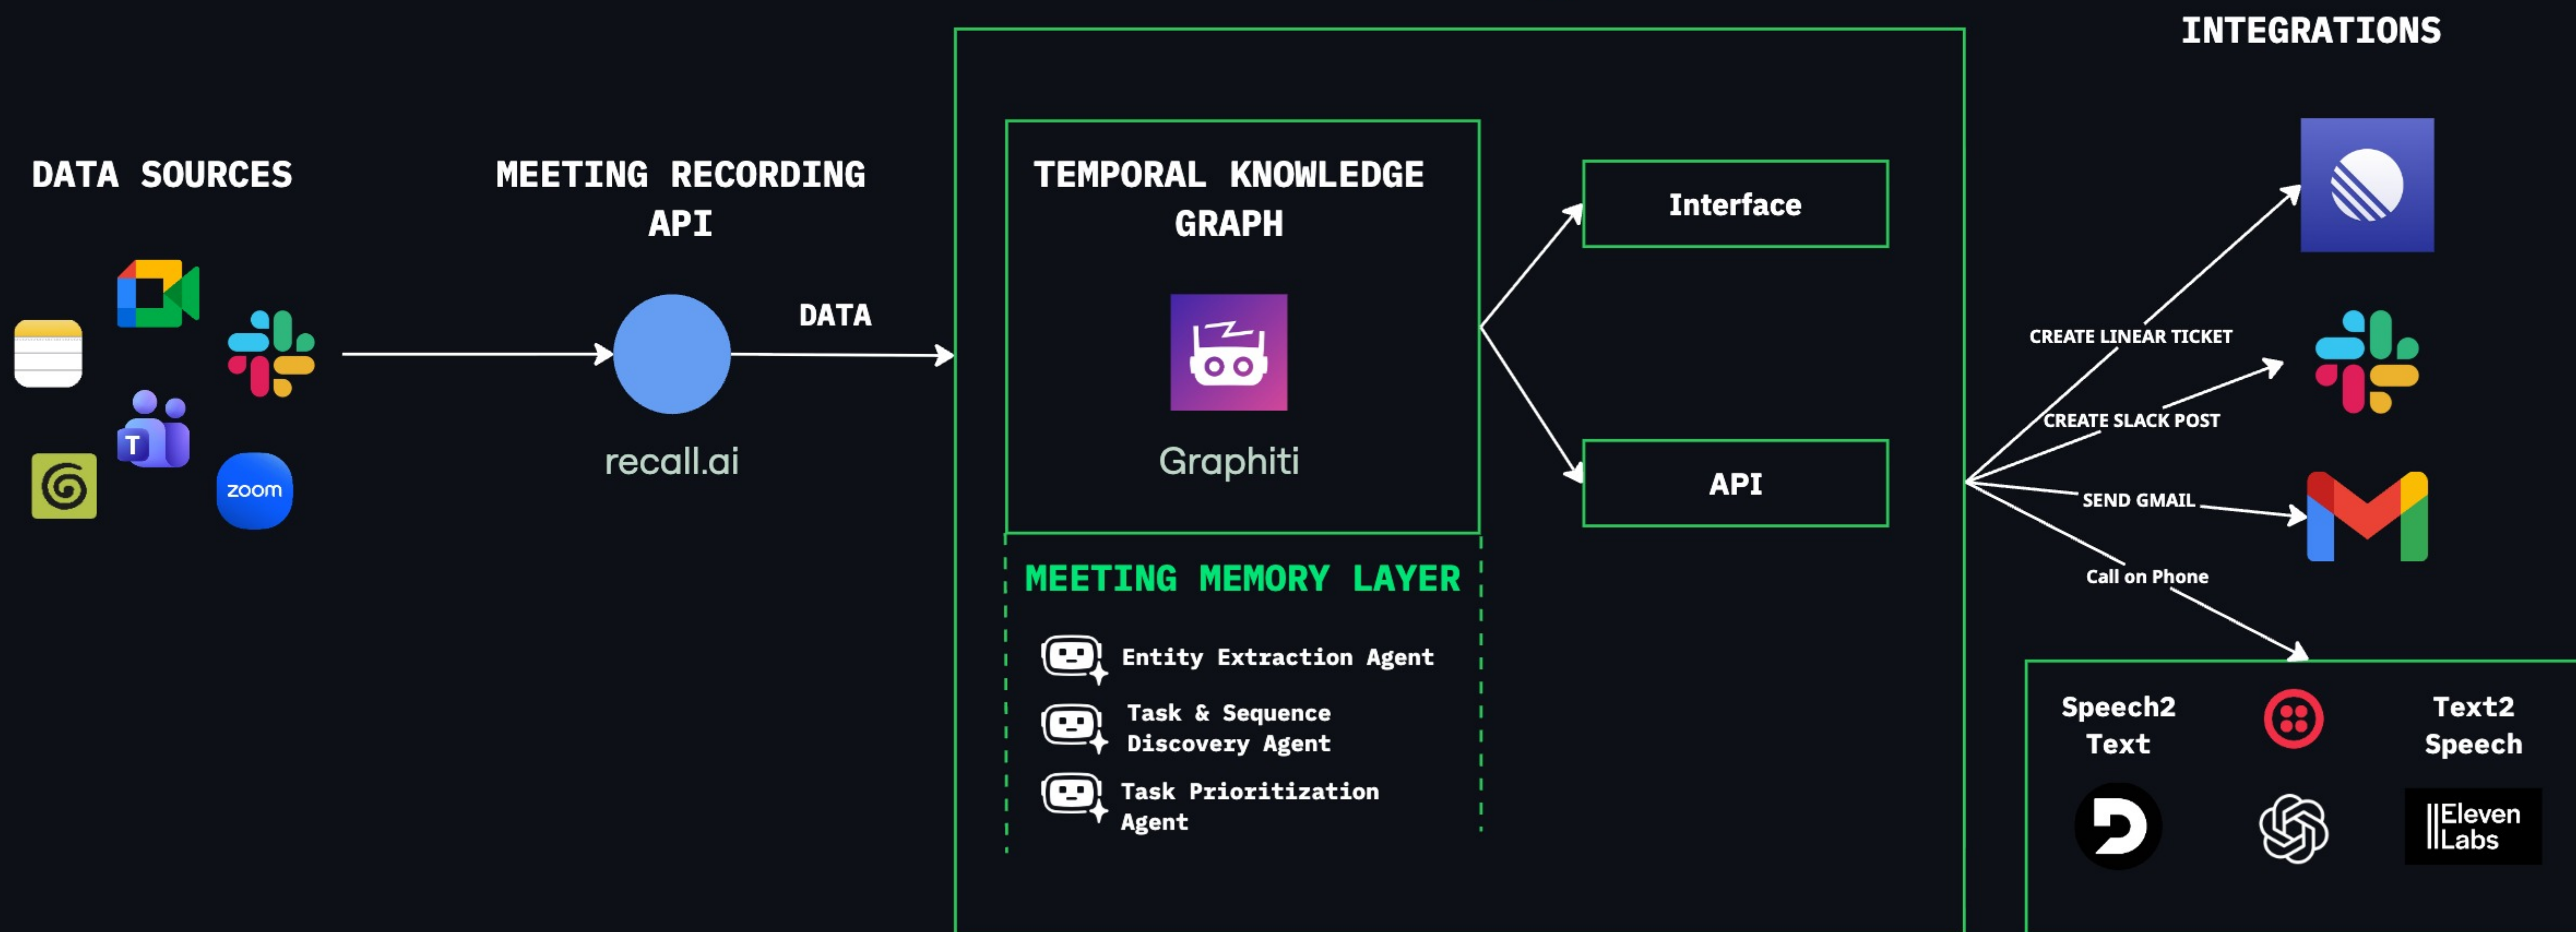

**404NOTmissing**

**An API that turns any transcript into  
connected, searchable, actionable  
knowledge.**

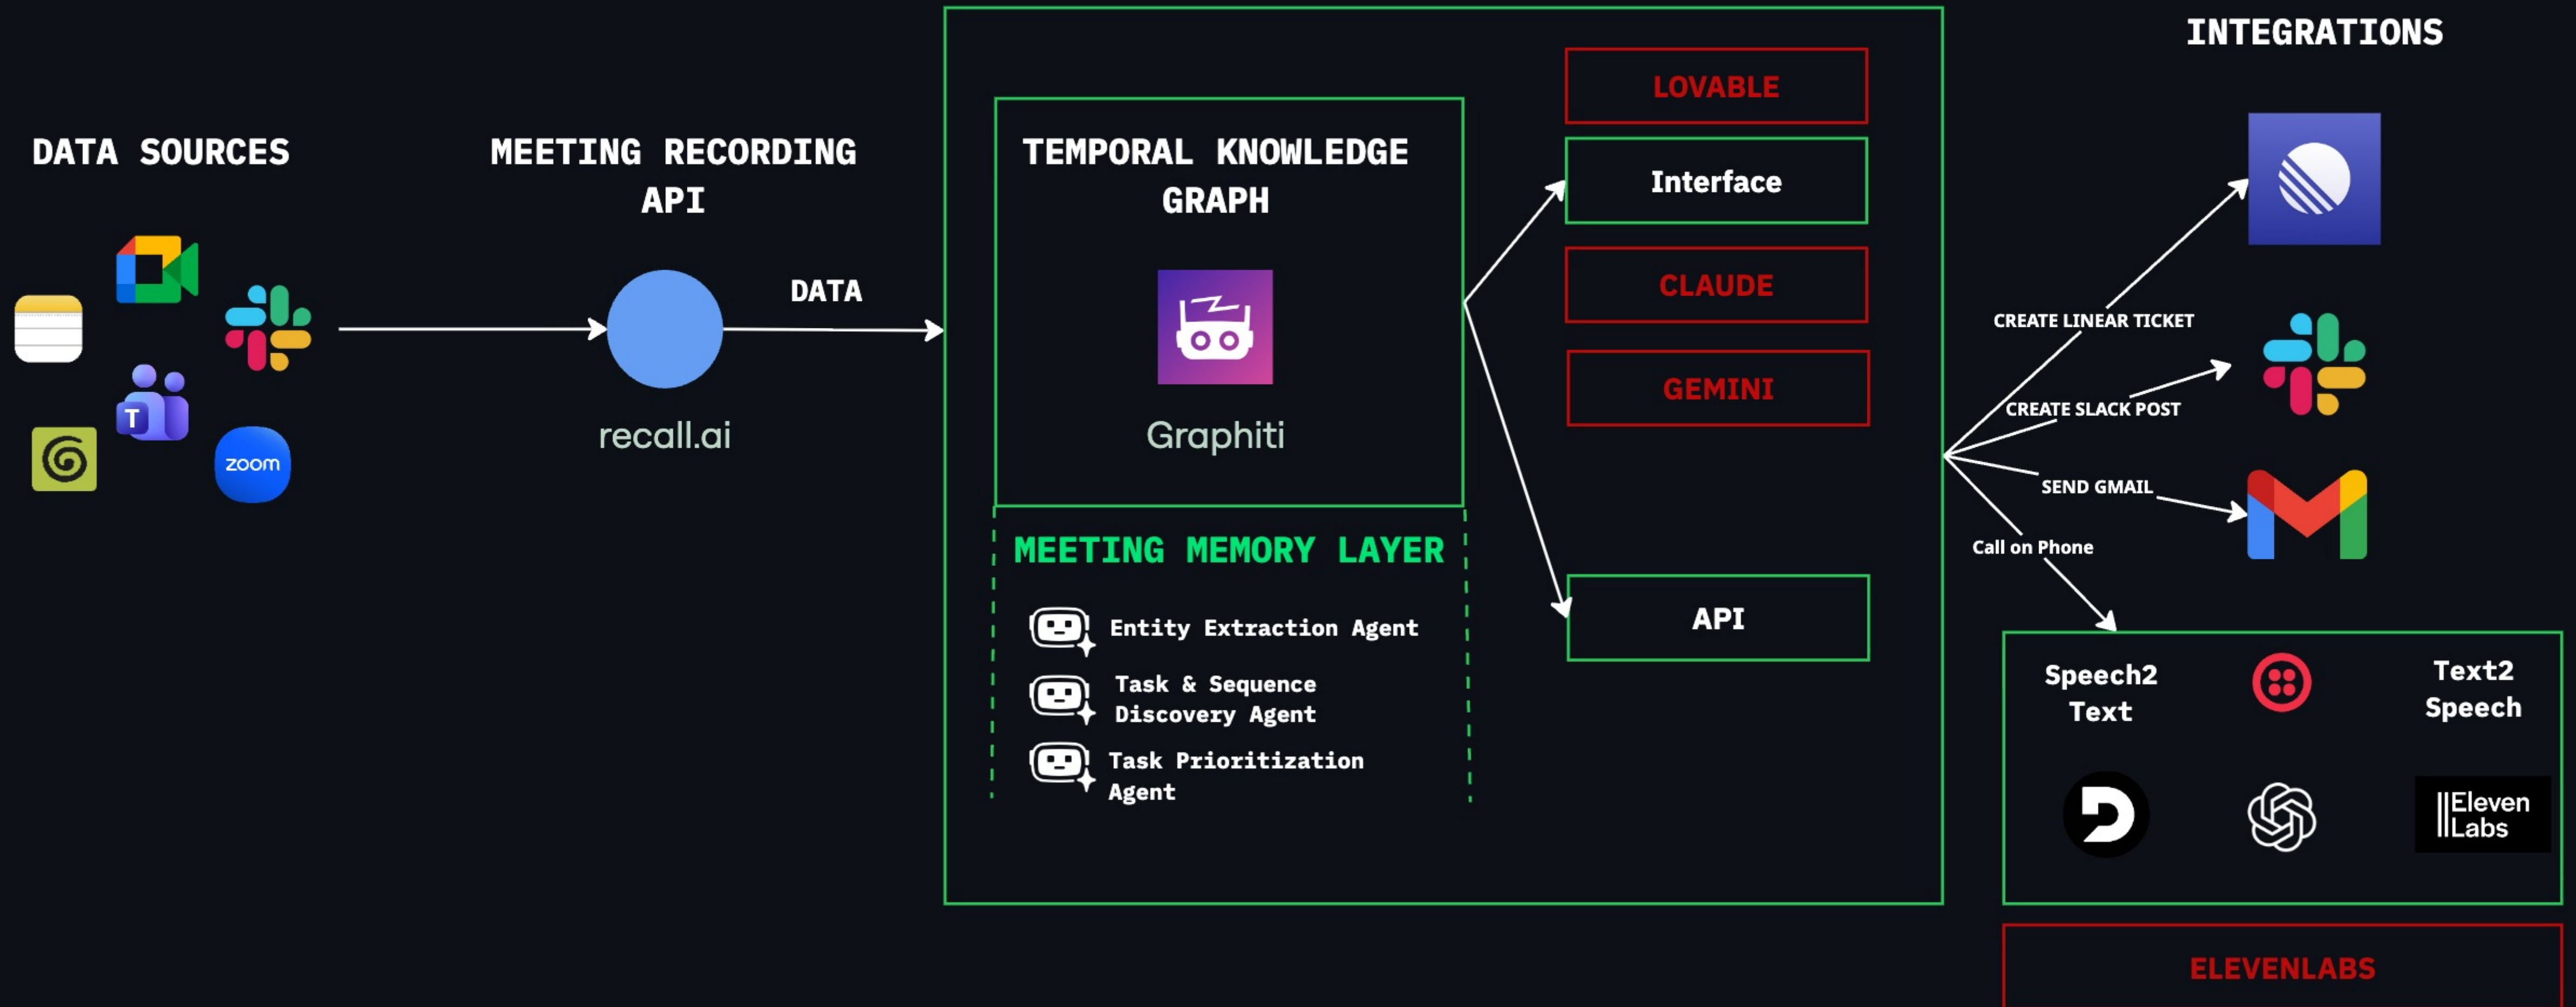

# HOW DOES IT WORK?

## 404NOTmissing

# CHALLENGES ADDRESSED

404NOTmissing

# Live Demo

# We imagined **HackEurope** meant:

	C-level	Ops	Finance	Marketing	IT	
C-level	weekly	sync	sync	sync	–	3 preparation months
Operations	sync	weekly	sync	–	sync	
Finance	–	sync	weekly	–	sync	
Marketing	–	sync	sync	weekly	–	
IT	sync	–	sync	sync	weekly	CEOs & 4 departments

→ up to **300 meetings** in total

AND STILL bracelets were missing...

# HackEurope with 404NOTmissing could have meant:

	C-level	Ops	Finance	Marketing	IT	
C-level	weekly	—	—	—	—	3 preparation months
Operations	—	weekly	—	—	—	
Finance	—	—	weekly	—	—	
Marketing	—	—	—	weekly	—	CEOs & 4 departments
IT	—	—	—	—	weekly	

→ only 60 meetings, because NO need for syncing meetings

AND NO bracelets missing...
